# Kidney WORLD DAY

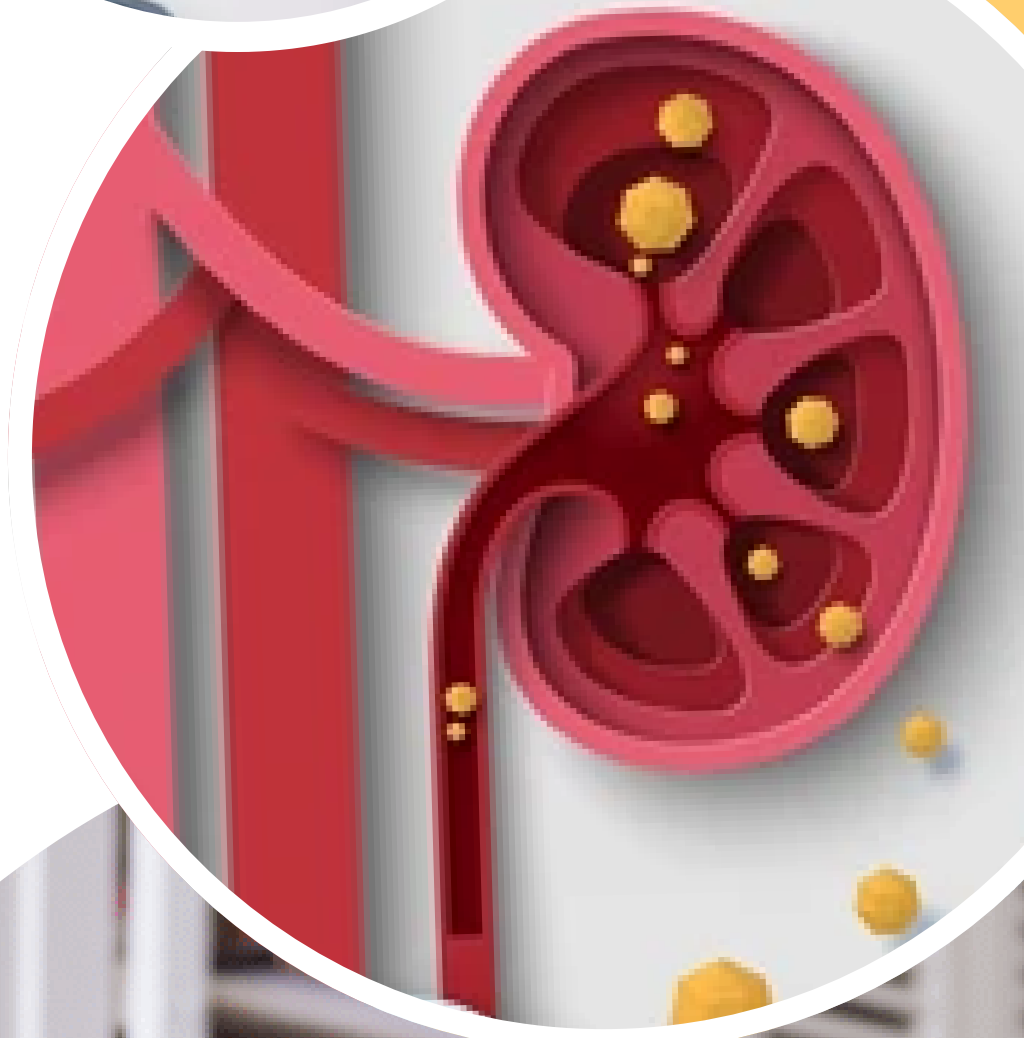

“If you name any organ system, we can figure out a way that kidney health impacts it. Renal function really affects the entire pet.”

—Christine Kirnos, VMD, CVA

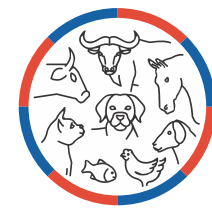

## Keep Renal Health at it's Best!

Monitoring kidney health and providing proper treatment in dogs and cats is crucial for maintaining their overall well-being, detecting potential issues early, preventing complications, and ensuring a higher quality of life.

Let's give them the care they deserve!

March

# COMMON KIDNEY DISEASES IN PETS

## **Chronic Kidney Disease:**

CKD is the most common renal disorder in dogs and cats. In CKD the damage is progressive and irreversible, and renal function generally slowly declines over a period of months-to-years.

## **Acute Kidney Injury:**

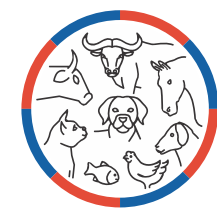

AKI is a rapid and severe loss of renal function, Unlike chronic disease, resolution of the acute injury, treatment of the underlying cause, and/or adaptation of the kidney can reverse the clinical signs

## **Urolithiasis:**

A common condition responsible for lower urinary tract disease in dogs and cats. High intake of minerals and protein along with highly concentrated urine can lead to increased saturation of salts in the urine.

*Worry Not*  
We've got it under control!

## Support - Kynetra

Is a Kidney Health Support Formula. Beneficial in CKD and urolithiasis including nephropathy secondary to diabetes, and hypertension. Improves Kidneys function by reducing excretion of proteins.

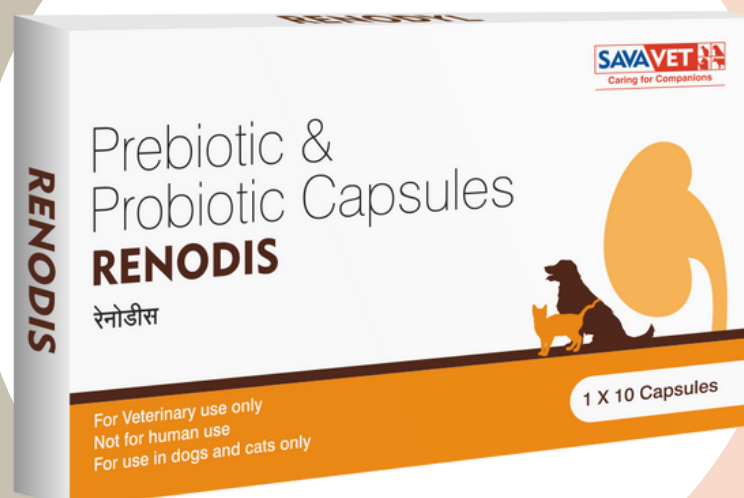

## Protect - Taurians

Contains 2 potent anti-oxidants – N-acetyl cysteine & Taurine, which help to protect against damage from oxidative stress in patients with chronic kidney disease and AKI.

## Manage - Renodis

3 live therapeutic bacteria validated in patients to manage kidney diseases. They perform natural enteric dialysis to slow down uremic toxin build-up in patients with renal insufficiency.

## Balance - Phoslure

Balances high phosphorus levels in the blood (Hyperphosphatemia) which is one of the most common conditions in patients with CKD and AKI.

## Care - Aceptor

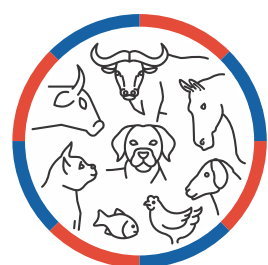

Helps in dilatation of blood vessels, thereby reducing blood pressure. It also reduces protein loss associated with Chronic Kidney Disease (CKD),

# OUR Kidney PORTFOLIO

Journey of  
**10+**  
Years

**SAVAVET**  
Shaping the Future

Delivering value and care by safeguarding, extending and improving the lives of our patients.
